

Gordon and Grant Explain Redwood Tubs.

The popularity of redwood hot tubs is growing rapidly. Many retailers would like to stock them, but are hesitant due to unfamiliarity with the product. Gordon & Grant would like to change that.

High Quality.

A Gordon & Grant redwood hot tub will last up to fifty years with virtually no maintenance. It is made of 2", clear, all heart, vertical grain kiln-dried redwood. It will never splinter or leak.

Easy to Assemble.

Two inexperienced men can assemble a Gordon & Grant tub in three hours. Experience naturally shortens this time. The only tools needed are a hammer, two wrenches and a table saw. The unfilled tub weighs about 350 pounds and is easily moved.

Standard Plumbing.

Hot tubs use standard pool and spa pumps,

heaters, filters, jacuzzis, etc., that you probably already have on the shelf.

Energy Saver.

Redwood is a very efficient insulator. A covered tub will lose only a couple of degrees per day even in cold weather.

Year-Round Sales and Installation.

Gordon & Grant tubs can easily be set up indoors, in basements or in garages for all-season use.

Minimal Maintenance.

The art of containing water in wooden tanks is thousands of years

old. It is *perfected*. A Gordon & Grant tub needs no *maintenance* beyond ordinary water chlorination.

Many Shapes and Sizes.

Gordon & Grant make tubs in sizes ranging from modest 2-person tanks to the immense 10-foot units. Besides the standard circular tub, Gordon & Grant manufacture the only true oval tank in the business.
