

Easy, affordable printer sharing from Linksys.

MultiShare daisychains up to 24 PCs and 8 printers with phone wire over 1,200 feet. No more getting up to swap printer cables. No more dedicated print servers. And never lose another print job—MultiShare is fully equipped with Advanced Collision Avoidance Technology. Installation couldn't be easier. Position your PCs and parallel plotters, dot matrix, laser and color printers any way you like.

Connect a transmitter to the parallel port of each PC, and a receiver to each printer. String them all together with telephone wire—and print! The MultiShare Starter Kit gets you started with 1 Transmitter, 1 Receiver, and 25 feet of telephone wire—enough to attach one PC to one printer.

Add additional Transmitters and Receivers as needed.
